"I am pleased to announce that our performance during the first quarter exceeded our expectations as quarterly revenues continued to increase to \$351 million during the first quarter helping to narrow our operating loss to \$6 million in the first quarter," said Dr. Richard Chang.

"Our revenues from 0.13 micron and below technologies increased to 47% of total revenues in the first quarter. Revenues generated from 0.15 micron and 0.13 micron and below logic products as a percentage of our logic revenues significantly increased to 14.5% and 13.3% in the first quarter from 8.6% and 10.9% in the fourth quarter. We expect that these trends will continue as we have received a significant increase in 0.13 micron full flow orders and as we commence commercial production for our first 90 nanometer product.

The NAND flash development team has successfully taped out a 2-gigabit NAND flash product during the first quarter. The development remains on schedule to deliver the first engineering samples in June and we target commercial production of this product in the fourth quarter of 2006.

Our Chengdu project began commercial production during the first quarter allowing SMIC to now offer in-house turn-key IC manufacturing for our customers. In addition, our solar power module project is moving along nicely and continues to improve its energy conversion rate. This project is on schedule for starting commercial production in the second quarter of this year.

We believe that the execution of our business plans will lead to an increase in shareholder value."
